FOR RELEASE SEPTEMBER 29, 2022:

***Smart Business* Honors PTI**

Westlake, OH –

Pavement Technology, Inc. (PTI) recently was honored by *Smart Business* magazine at its annual Family Business & Business Longevity Conference, which took place at Tri-C's Corporate College East on September 29th.

PTI is currently celebrating its 50th year in business, developing and applying pavement rejuvenation technologies to America's roadway, bridge, airport and highway infrastructures. For more details, please visit the *Smart Business* website, page 42 of the [September 2022 edition](#).

2022 FAMILY BUSINESS ACHIEVEMENT AWARDS • BUSINESS LONGEVITY AWARDS

John Anthony Orlando
President & CEO

Orlando Baking Co. has been a Northeast Ohio favorite for decades. The bakery is known for balancing its original Old World style with New World innovations that keep it adding new products.

As Orlando celebrates its 150th anniversary throughout 2022, it also celebrates its tradition of doing things the right way with its slow baking process, smaller batches, traditional European style, state-of-the-art equipment and on-trend flexibility. Orlando's first-to-market innovations include ciabatta bread in 1987 and probiotic bread in 2011.

Founded in Castel di Sangro, Italy, in 1872, part of the family moved to Cleveland in 1904 and re-established their Old World ways of baking European classics. The company's signature ciabatta bread is a staple on menus across the United States, along with its variety of specialty breads and rolls. Headquartered in Cleveland, Orlando is a leading bakery, producing more than 250 varieties of fresh and frozen hearth-baked bread, rolls and specialty items.

The fifth-generation family-run business employs over 300 associates in its 200,000-square-foot facility on Cleveland's east side. In addition, the family has just broken ground on a 156,000-square-foot public cold storage facility called Cleveland Cold Storage. This project is spearheading development on the city's Opportunity Corridor and is the beginning of Orlando Baking Co.'s next 150 years. •

Gary Hibbar
CEO

The year 2022 marks the 130th year of operation for The Osborn Engineering Co.

Founded by Frank Osborn in 1892 at the height of the Industrial Revolution, Osborn incorporated eight years later as a 100 percent employee-owned engineering design firm.

Osborn operates under its original articles of incorporation, surviving for 130 years as generation after generation of professional employees have bought stock in the company, surviving economic depressions, world wars, monumental societal changes and major technological inventions. Osborn strives to imagine possibilities and design solutions for clients to meet their complex and unique business needs.

Woven throughout its design process are the principles of sustainable, responsible engineering. It is driven by an attitude of "Do whatever it takes and do it right."

The Osborn bottom line is integrity. As an employee-owned firm, its collective vision is to maintain its status as a premier engineering company dedicated to innovation, sustainability and client service.

All aspects of the value system introduced by Frank C. Osborn in 1892 are followed today. Professional excellence, 100 percent client satisfaction, creativity and respect are values that make up Osborn now and will continue to do so as it moves forward. By staying true to its values, the company continues to build lasting relationships. •

Colin Durante
President

Pavement Technology Inc. helped bring America's first Maltene Replacement Technology to public works professionals. Today, PT continues to leverage the pavement preservation experience and knowledge of sustainable technologies by developing, distributing and applying life-extending, environmentally responsible asphalt and concrete preservation solutions. Products for roadways reduce the harm of pollution caused by vehicle exhaust emissions.

For nearly 50 years, PTI has partnered with public works agencies, research institutions, environmental planners and community activists to apply maltene-replacement technology and rejuvenate asphalt roadways, runways and bridges across America. As PTI's products reduce the damaging effects of vehicle emissions, they extend road lifecycles. That lowers the frequency of road replacements, saving financial and environmental resources.

PTI was founded by Colin Durante, who continues to run the operation nearly 50 years later. His daughter, Susan Durante, is the chief of staff, and his son, Michael Durante, is vice president of Finance and Strategic Planning. The synergies among the immediate family members are extended to employees, who cover the eastern half of the United States, with substantial work in Ohio and Florida. Despite the expansive area covered, employees refer to each other as family.

PTI continues to test and advance its products to sustain the environment and create a brighter future for all generations. •
